

Release Notes & Updates

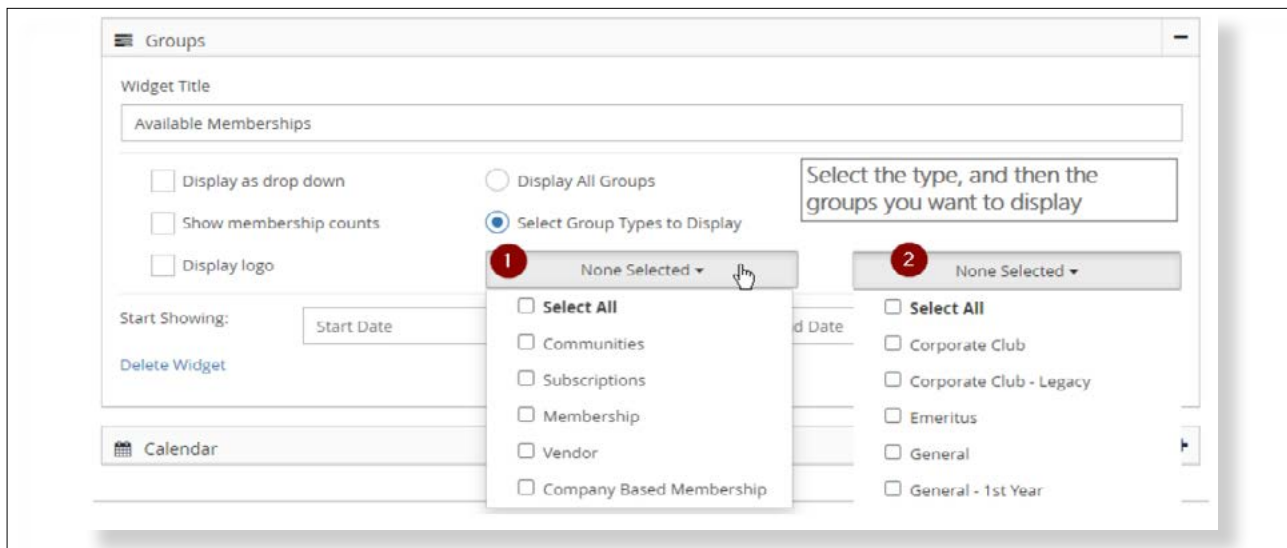

New Features and Updates for the (22.22) Release

Please check page 3 for a list of ALL our new features and updates.
Here are a few updates that we want to highlight. :-)

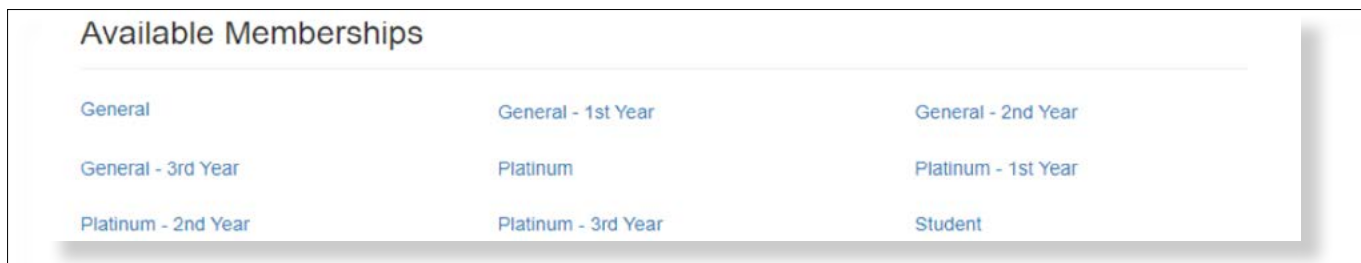

New Widget Updates

Our highlights today are focused on some Widget updates. Widgets are those cool tools you can drop on your catalog page, and you can find these in the Appearance > Layout area.

Our first update is regarding our Groups widget. This has been updated so that you can select multiple group types and/or groups, rather than all or just one and this is found under the "Search" widget options.

Which looks like this in the content section:

It looks like this when placed in the sidebar:

The next update is related to a brand new widget we've been working on called the **Single Column Upcoming Live Program List**. It's a mouthful, for sure, but this cool new Product based widget is designed to quickly show dated events on your catalog in an abbreviated view. This widget is specifically designed to show off your courses that have dates, like Webcast, Live Events, or Replays.

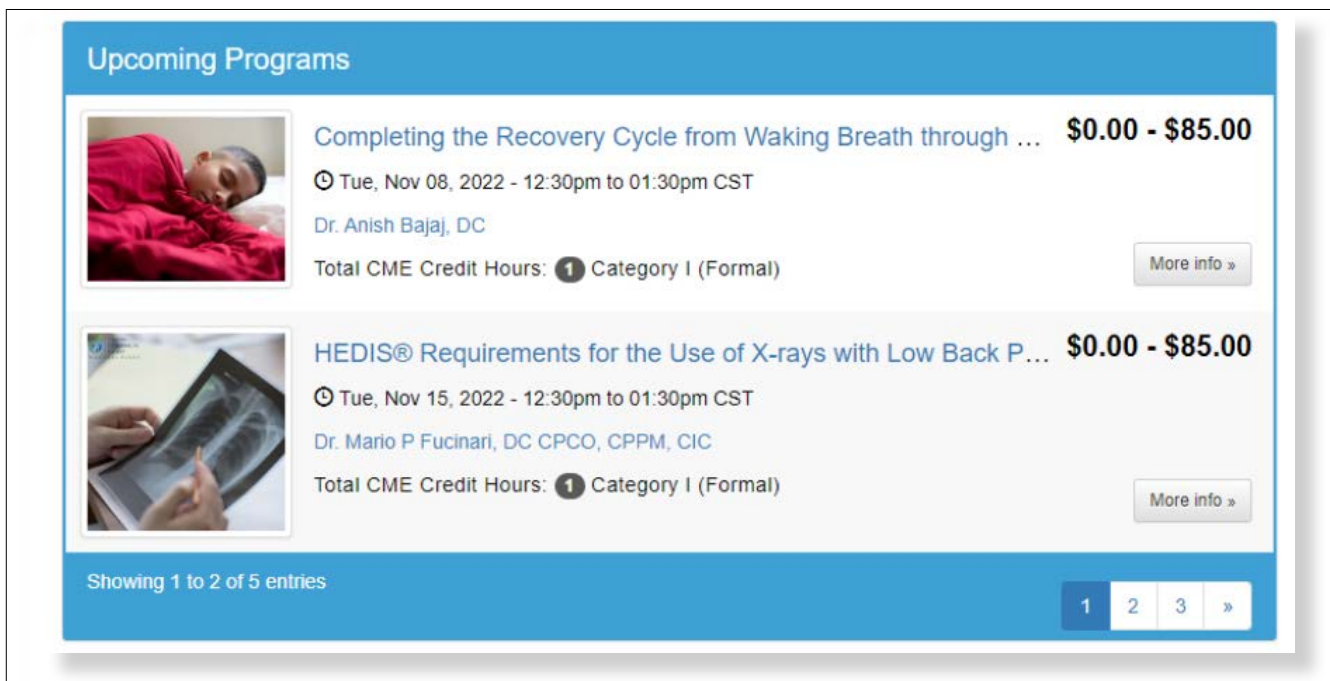

Here's all of the awesome settings you can tweak on this cool new widget.

- Choose to display products based on their type, their category or their tag. Remember, only dated events will show in this widget.
- Use the color chooser to set headers, rows and fonts based on your own color scheme.
- Use our date view or product image view in the thumbnail to the left of the row.
- If you use our date view, you can set those colors as well.
- Choose to keep it very simple, or add in credit info, venue info, price and product image.
- Set the number of products to display per page

On the catalog, that looks like this:

But you can edit it in a variety of ways. This widget can also look like this:

Release Notes & Updates

New Features and Updates for the (22.22) Release

If you have any questions about the items listed in this release, please visit [The Exchange](#) and leave a comment.
